

# Technical Director / Software Architect

## **Overview**

ProximaHQ is seeking an experienced and innovative Technical Director to join our team and to support the ongoing growth of our Proxima product. Proxima is a real estate platform that delivers the most effective pre-sale buying experience without ever needing to build an expensive presentation center. Reporting to our Product Lead, you will be responsible for design choices, technical standards and oversight, including software coding standards, tools, and platforms.

As Technical Director you will lead Proxima's development team. You will guide technical strategy and technical architecture for our company. You're passionate and proficient with web and mobile applications. You also have a keen interest and even some hands on experience with XR technologies.

Most importantly, you have hands-on experience delivering products within a multidisciplinary team structure, using Lean or Agile processes. Your dedication to quality shows in your past work and you want to work with people who are equally dedicated to delivering to a high quality bar.

## **Strategic impact**

You are an active contributor to product strategy, as a senior member of the product team.

You drive the technical elements needed to support the strategic plan and in doing so, you will develop and execute a technical growth plan.

You're a talented architect, with an eye towards scalability and extensibility.

You foster a culture of excellence. You are a driver and advocate for our high-performance, team-oriented culture.

### **Core responsibilities:**

- Be the go-to tech person in the company – the one who ‘owns’ the architecture for our product across multiple platforms. From high level planning to long term execution, you ensure our architectural designs and decisions are executable, and align with the big picture.
- Understand broad industry trends in technology, and can advise our team on current and future strategies
- Define and implement technical strategies within budget and time constraints
- Identify and advise on tech risks
- Lead and mentor the technical team to deliver world class development

### **Leadership skills:**

- Proven experience with team leadership within multidisciplinary teams.
- Able to lead code-reviews, set/enforce code standards, define and execute a technology plan
- Strong communication skills and a strong advocate for collaboration and interdisciplinary problem-solving
- Able to synthesize and communicate the outcomes of collaborative sessions with team members.
- Strong presentation skills and ability to articulate ideas with clarity and energy
- Ability to communicate complex issues and solutions to a wide range of audiences
- Highly committed to excellence; constantly looks for ways to raise the bar in order to achieve excellence in all areas.

## **Technical skills and experience:**

- Experience architecting and building from scrappy start-up to large scale projects with an emphasis on performance, scalability, and security
- Can effectively articulate business and user experience design goals into technical requirements to be acted on by the development team
- Expert in web technologies and creating highly interactive applications using JavaScript frameworks
- Expert in server-side development with a focus in one or more languages (C#, PHP, Python, etc...)
- Experience in delivering products for mobile (native or web apps)
- Some experience with or familiarity with WebGL and PlayCanvas
- Experience designing API layers
- Experience working with distributed teams in multiple time zones.
